

NACHI

DEEP GROOVE BALL BEARINGS

Table of Contents

Introduction and Configuration	2-4
Dimension Tables	5-16
Bore Diameter: 10~25mm	5-6
Bore Diameter: 28~50mm	7-8
Bore Diameter: 55~80mm	9-10
Bore Diameter: 80~110mm	11-12
Bore Diameter: 120~170mm	13-14
Bore Diameter: 180~320mm	15-16
Radial Internal Clearance	17

Deep Groove Ball Bearings

Because of their versatility, Single-row, Deep Groove Ball Bearings are the most popular of all ball bearing types.

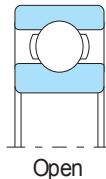

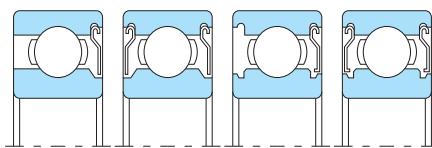

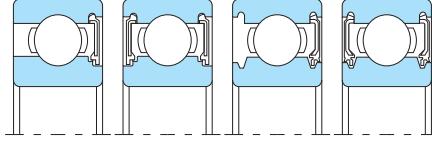

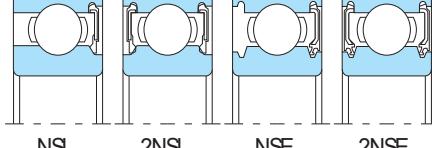

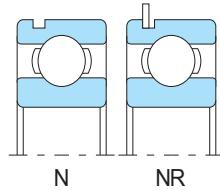

NACHI Deep-groove Ball Bearings are available in a wide range of series defined by the JIS(ISO) standard dimension plan and are also made to meet specialized dimension and configuration requirements. NACHI Deep Groove Ball Bearings are manufactured in both standard precision

grade (ISO Grade 0 - ABEC Grade 1) as well as in high-precision grades.

Table 1 shows common, standard configurations of Single-row Deep Groove Ball Bearings.

Table 2 next page shows a comparison of general characteristics of seal and shield designs for Single-row, Deep Groove Ball bearings.

Table 1. Standard Configuration of Single-row, Deep Groove Ball Bearings

Configuration*	Design	Cross section
Open (no seals, shields)	Consists of inner and outer rings, balls, and cage.	 Open
Sealed or shielded Bearings	Shield	One or two steel shields provide labyrinth clearance  Z ZZ ZE ZZE
	Non-contact Rubber Seal	One or two non-contact rubber seals provide labyrinth clearance  NK 2NK NKE 2NKE
	Contact Rubber Seal	One or two contact rubber seals in contact with inner ring  NSL 2NSL NSE 2NSE
Snap-ring Groove in Outer Ring	N: with snap-ring groove in outer ring. NR: with groove and snap ring in outer ring. (Use of snap ring allows easy mounting and simplified housing design.) Bearings may also be sealed or shielded.	 N NR

Note : One seal or shield type bearings may have a seal groove on the other side.

Deep Groove Ball Bearings

Table 2. Comparison of Seal and Shield Characteristics

Characteristics	Shield (Z, ZE)	Non-contact Rubber Seal (NK, NKE)	Contact Rubber Seal (NSL, NSE)
Friction torque	Low	Low	Higher than NK,NKE, Z and ZE
High speed	Excellent	Excellent	Good (There is some limitation)
Grease sealing	Good	Better than Z,ZE	<ul style="list-style-type: none"> • Excellent at low speed • The grease may leak from the bearing at high speeds and high temperature. • The grease may leak in case of outer ring rotation.
Dust proofing	Good	Better than Z,ZE	Excellent (Can be used in severe dust environments)
Water proofing	unsuitable	unsuitable	Excellent
Recommended operation temperature range for standard filled grease	-25~120°	-25~120°	-25~100°

Attention

(1) Deep-groove Ball Bearings can sustain radial, axial or composite loads.
However when excessive axial load is applied, please consult with NACHI.

(2) Because sealed or shielded bearings are designed for inner ring rotating applications, the filled grease may leak when they are used with a high speed outer ring rotating condition.

In such a case, please contact NACHI.

(3) When bearings with contact rubber seals are used in a severe operating condition such as high speed or high temperature, the filled grease may leak.

In such a case, a design change or another kind of grease is required.

(4) When a bearing is mounted on a shaft (into a housing), force should only be applied to the side face of the inner (outer) ring.

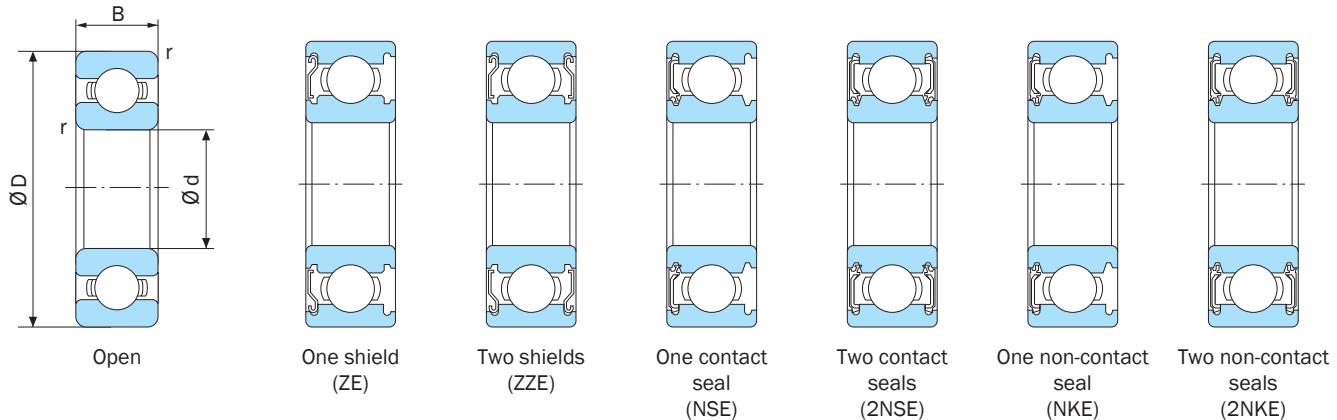

(5) The sealed or shielded bearings should not be washed or heated before mounting.

(6) It should be noted that mounting errors such as misalignment of the bearing rings cause an appreciable increase in noise level.

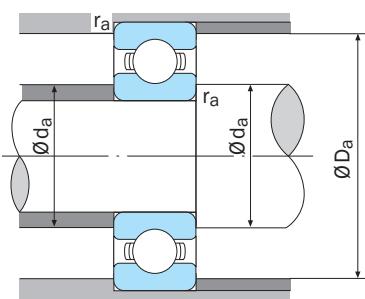

(7) The bearings must always be subjected to a minimum load to prevent sliding movements occurring between the balls and the raceways.

Deep Groove Ball Bearings
